

# ZEN

## Ergonomic cushion

The new ergonomic cushion, Zen supports the nape of the neck and maintains the head correctly aligned.

It is made of a closed-cell elastic compound.

A new moulding system makes it not only lightweight, but also gives it a soft and self-filming finish, which makes it easy to sanitise.

Zen is anti-toxic and anti-allergenic, but above all it offers elasticity and is indeformable over time, thus guaranteeing the patient's comfort for the whole duration of use.

The design and density derive from the need to have a unique cushion for different builds and postures.

Zen can be used for all patients, supplying a range of flexible solutions, be it for the necessity to offer exceptional comfort to the patient and also for special postures, that allow a more effective performance of resuscitation and therapeutic operations.

Thanks to its design, Zen can be used with adults and children and absorbs mechanical stress and shock caused by impact. Disposable pillowcases made of TNT are available.

### Technical details

Dimensions	270 X 125 X h215
Weight	518 g

Latex free

QM50000A
